

Apex Psychiatric Services, LLC

KETAMINE INTRAMUSCULAR FEE SCHEDULE

Medications used to treat Major Depressive Disorder often fail to provide relief for 1 out of every 3 people affected. To someone with Treatment-Resistant Depression, the extra time commitment needed for initiating Ketamine treatment is likely not even a concern if there is possibility of finally getting symptom relief.

The team at Apex is committed to helping people with Treatment-Resistant Depression finally get some relief from their depression symptoms. That is why we have decided to offer ketamine treatments for clients who have not responded to more traditional treatment options. Just as initiating this treatment option is a commitment of your time, it is also a large commitment of our staffing resources.

The first 2 months of treatment usually entails receiving a treatment 2 times a week for 4 weeks and then 1 time a week for 4 weeks. Ketamine is then administered once weekly, once every 2 weeks, or less often depending on individual response. Our rates for these services are listed below (this includes medication costs). Our fees equal approximately what a specialist's copay would be per visit. Our goal is to keep cost low and make this novel treatment affordable for all who need it.

Administration Fee is Just \$100 Per Administration Paid at the Time of Treatment. Estimated cost are as follows:

1st Month of Treatment —**\$800** total

2nd Month of Treatment —**\$400** total

3rd Month of Treatment and beyond—**\$200** total if maintaining on 2 treatments per month

****The Ketamine treatment you are about to receive is a medication being used off-label to treat depression, PTSD, Anxiety, & various other ailments. Although numerous studies have shown efficacy with ketamine in treating many disorders, the formulation you are receiving has NOT been FDA approved for the reason you are receiving it****
